

Produced Water (Brine)

Application: Highly corrosive produced water (brine) stripped from oil and gas prior to transfer was moved by pipeline from receiving tanks to separators, holding tanks, heaters, etc. at refining facilities.

Location: Refining Facility - Calgary, Alberta, Canada

Product: Over 800 spools of 2"-20" Red Thread®II pipe manufactured to API 15LR specifications and rated to 150 psi cyclic at 200°F.

Features & Benefits: Fiberglass pipe is resistant to internal and external corrosion without the additional cost of cathodic protection or coatings.

Lightweight pipe eliminated the need for heavy equipment.

The locking tapered adhesive joints made installation quick and easy.
