

Jet Fuel Delivery Piping

Application: Jet fuel transfer line located in a former coal storage area that is loaded with cinder. Rain and high water tables react with the cinder to form a corrosive acidic condition.

Location: Hartford Electric Light Company - Hartford, Connecticut

Product: 1,600 feet of 8" Red Thread® bell & spigot joint pipe

Features & Benefits: Fiberglass pipe is resistant to external corrosive conditions without the additional cost of cathodic protection or coatings. Fiberglass cannot form jet engine damaging rust on the interior.

Lightweight pipe and locking tapered adhesive joints make installation quick and easy. Three workers installed the system in nine days.

Large smooth bore provides excellent flow characteristics.
