

## US/Canada Bridge

Application: Fueling station for trucks and cars

Product: Over 3,000 feet of 2", 4,000 feet of 3" and 1,000 feet of 4" Red Thread® IIA pipe

Features & Benefits: In 2008, construction was completed on the duty-free shop at a bridge that goes from Detroit, Michigan to Windsor, Canada. This shopping area has three large fueling facilities for both trucks and cars.

In an effort to save money and maximize the flow of the gasoline and/or diesel fuel, the decision was made to go with the Series Piping method for the facility. Series Piping is a cost saving alternative to parallel piping where the piping goes straight through dispenser sumps, minimizing fittings and maximizing flow.
